Second Best Practice

Title: Intertwining technology with the field of Education.

Goal

To make the student teachers aware of using technology in the field of education and develop competency at global level using minimum resources.

The Context:

Using easily available technology for preparing teaching learning material to educate and spread knowledge en masse.

Objective

To groom student teachers with knowledge and training to use latest, easily available technology for transferring information.

The Practice

The institution has started training student teachers to prepare videos using power point slides. Now a days computers are easily available even in the remote areas of India. The institution is inculcating knowledge in student teachers to prepare videos. After learning the process student teachers are preparing videos using this technique. The institution arranges ICT workshop in the campus, in which student teachers are made aware of the process of making power point slides. During ICT classes they practice to prepare good decent slides related to their curriculum. Under supervision of faculty members they modify and add text, if required, to improve and explain the topic. Faculty members supervise the process by which student teachers record their voice and convert the file in mp4 videos. Thereafter the faculty members upload their files on institutional Youtube channel. Using link of the video they can view the videos on their mobiles.

The institution is motivating student teachers to adopt this audio-visual technique because the beauty of this is the easy availability, low cost and ease of the process.

Evidence of success

The student teachers are using this technique enthusiastically and preparing their videos. Student teachers have started using this process for micro-teaching, simulating teaching, preschool teaching practice, criticism lesson planning etc. Till date more than 200 videos prepared by the student teachers have been uploaded.

Bharatpur**

Problems encountered

To motivate and encourage student teachers to use this technique instead of traditional rolling blackboard technique.

Resources Required

Computer, power point program, internet.
